

AGROMETEOROLOGICAL BULLETIN

SEPTEMBER 1973

The weather during September

Apart from the first three days, the first half of the month was dry in most parts of the country and little or no rainfall was recorded in the period 4th - 14th except near northwestern and northern coasts. During the second half of the month, however, there were frequent falls of rain in most places especially in the southern half of the country where the rain was heavy at times, particularly on 18th, 24th and 27th. By the end of the month, ground conditions had become very difficult for the harvesting of root crops. Rainfall totals for the month were generally well above normal in Munster and south Leinster and at Roche's Point (188% of normal) it was the wettest September since 1958.

For the first three weeks of the month temperatures were well above normal and with plentiful supplies of soil moisture, growing conditions were excellent. The period 3rd - 9th was particularly warm with day-time air temperatures of over 21°C being recorded in most inland places. Temperatures dropped sharply during the last week when cold northerly winds swept over the country and ground frost was reported from many inland areas during the period 23rd - 27th. Totals of degree-days above 10°C accumulated over the month were generally 10 - 20 above average; over the May-September period this year, degree-day (above 10°C) totals were 60 - 70 above average in inland parts of the country.

Strong winds were experienced during the last four days of the month and were accompanied in most places by rain and on the 28th by hail. Gales were widespread on 27th when gusts of up to 69 knots were reported in the Dublin area.
