

AGROMETEOROLOGICAL BULLETIN

SEPTEMBER 1971

The weather during September

September was dry, warm and sunny and although drying conditions were rather poor at times because of fog and heavy dew, it was, by and large, a good month for the harvesting of grain crops.

Rainfall was well below normal everywhere and in most places was less than 50% of the September average. In parts of Kerry it was the driest September over 40 years and in north Donegal where the rainfall was only 23% of normal, it was the driest September since 1933. The period 4th - 22nd was particularly dry in many areas; most places in the Mid;ands, East and North had little or no rain during this period but in the South and West, there was a temporary break in the dry spell from the 9th - 12th.

Temperatures were above normal everywhere and during much of the month daytime air temperatures were over 3^o C above normal in most places. Mean air temperatures ranged from 0.9^o C to 1.8^o C above normal. There were some occurrences of ground frost in inland districts, mainly during the second half of the month; the lowest grass temperature reported was -5.5^o C, recorded at Glenties, Co. Donegal on the night of the 24th/25th.

TABLE 1.

RAINFALL, TEMPERATURE, SUNSHINE AND WIND

SEPTEMBER 1971
