MONTHLY AND ANNUAL SUMMARIES OF  
PRESSURE, TEMPERATURE AND PRECIPITATION  
FOR  
VALENTIA OBSERVATORY  
FOR THE YEARS  
1937 TO 1949

DUBLIN

24306

Notes

Valentia Observatory is situated at Latitude  $51^{\circ} 56' N$ , Longitude  $10^{\circ} 15' W$ . Height (of barometer cistern above mean sea level) is 13.7 metres.

The normals of barometric pressure and 24 hour mean temperature used refer to the period 1871-1915.

The normals of precipitation used refer to the period 1871-1920.

Values of mean pressure at mean sea level and 24 hour mean temperature are based on hourly values of the elements concerned.

In September 1940 the record from the North Wall photothermograph used for determining temperature values given in this publication was defective for some hours during the period when the absolute minimum temperature for the month is considered to have occurred. The value given, within brackets ( ), has been estimated by means of continuous records and hourly eye readings of instruments exposed in a standard Stevenson screen standing in a railed-off enclosure about 40 metres to the north.

All data given in this publication are uniform with those previously published in Reseau Mondial. In that publication Valentia Observatory appeared as Station No. 334.

---
