

National Healthcare Quality Reporting System

PERFORMING WELL

More than **50%** 

of people eligible gave their views on their hospital stay in the National Patient Experience Survey.

84%

of patients said that they felt they were treated with dignity and respect while in hospital.

51%

of eligible people were screened for bowel cancer.

Mortality rates for the most common type of stroke have fallen to their lowest levels ever.

Staphylococcus aureus rates have decreased over the past 10 years.

86%

of people with hip fractures received surgery within two days of hospital admission.

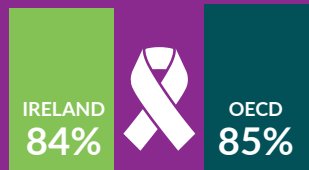

Hospitalisation rates for asthma and heart failure are below international averages.

We are screening more patients for the superbug, CPE.

Breast Cancer Survival

How Ireland compares to OECD averages:

Cervical Cancer Survival

Colon Cancer Survival

ROOM FOR IMPROVEMENT

Antibiotic use in Irish hospitals has increased for the past three years.

Only **39%** of healthcare workers got their flu vaccine.

Flu vaccine uptake rates for people over 65 years remain below target.

No region in Ireland met the national target rate for Meningitis C vaccination.

Benzodiazepine medicine use in women over 65 years is 40% higher than in men.

Only **35%** of patients said that they definitely got enough emotional support while in hospital.

More people with diabetes are being admitted to hospital.
