Weekly Epidemiological Report on COVID-19 cases aged 0-18 years in Ireland

Week 36, 2021

Health Protection Surveillance Centre, HPSC
COVID-19 Epidemiology Team, 13/09/2021

Dates to note:
• Week 36 2021 (5th to 11th September 2021)
• Week 10 2020 (1st to 7th March 2020) – The beginning of the pandemic in Ireland
• Wave 4 of the pandemic in Ireland (Week 26 2021 (week commencing 27/06/2021) to present)
• Please see next slide for additional dates to note

Note: The epidemiological weeks in this report, run from Sunday to Saturday, please refer to the surveillance resources on the HPSC website for a complete list of epidemiological weeks with start and end dates.

Note: Data were extracted from the Computerised Infectious Disease Reporting (CIDR) system on 13/09/2021 and 14/09/2021. These data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.
### Summary of important dates for childcare facilities (CCFs) and schools

Definitions

1. Outbreak Definition
   - There is a cluster/outbreak, with two or more cases of laboratory confirmed COVID-19 infection regardless of symptom status. This includes cases with symptoms and cases who are asymptomatic.
   - OR
   - There is a cluster/outbreak, with two or more cases of illness with symptoms consistent with COVID-19 infection (as per the COVID-19 case definition), and at least one person is a confirmed case of COVID-19.

The detection of a case or the declaration of an outbreak in a school or childcare facility does not of itself indicate that transmission occurred within the school or facility; clusters of cases may be detected within a particular setting despite exposure and transmission having occurred elsewhere.

2. Age Breakdown
   - Cases were broadly categorised by age groups that are associated with different school types: 0-4 years (pre-school), 5-12 years (primary school) and 13-18 years (secondary school). However, it is likely that there is some overlap in the ages of children attending all school types and children do not necessarily attend the school type indicated by their age grouping.
Introduction

Between March 1\textsuperscript{st} 2020 and September 11\textsuperscript{th} 2021, a total of 366,142 confirmed COVID-19 cases were notified on CIDR:

- 14,242 (4\%) of these cases were pre-school aged children (aged 0-4 years)
- 27,490 (7.5\%) were primary school aged children (aged 5-12 years)
- 32,454 (9\%) were secondary school aged children (aged 13-18 years)
- 291,905 (80\%) were adults (aged over 18 years)
- Age was unknown for 51 cases

A total of 74,186 confirmed cases of COVID-19 in the 0-18 year old population represents 5.9\% of the 0-18 population in Ireland* and 20.3\% of all confirmed COVID-19 cases in Ireland reported between week 10 2020 and week 36 2021

*Age-specific population data were taken from Census 2016

Data source: CIDR, September 13\textsuperscript{th} 2021
Summary of trends among 0-18 year olds, wave 4 2021

- The majority of schools had closed for summer before wave 4 of the COVID-19 pandemic in Ireland commenced (week 26 2021).
- The incidence of COVID-19 in all children aged 0-18 years increased during wave 4, reflecting general increases in the disease incidence in the country at that time.
- The proportion of cases among children aged 0-18 years also increased during this time period, however this is likely to be associated with increased vaccination rates among older age groups.
- In week 30 (week commencing 25/07/2021), COVID-19 vaccines began to be offered to those aged under 18 years; and a downturn in disease incidence in the vaccine-eligible cohort has been observed in recent weeks.
- The rate of infection among 5-12 year olds increased from 266.3/100,000 in week 35 to 350.3/100,000 in week 36. Similar increases were observed in this age group when primary schools re-opened in September 2020 and in February/March 2021 and may reflect increased testing of mildly symptomatic and asymptomatic children.
- The 2021/22 academic year commenced for the majority of students during week 35 2021. Forty outbreaks associated with schools were reported to HPSC during week 36 2021, an increase from the revised number of 17 outbreaks reported in week 35 2021. The increase in the number of childcare outbreaks continued in week 36. This may be due to more children returning to childcare alongside the re-opening of schools.
- Increases in the incidence among school-aged children or declaration of outbreaks in a childcare facility or school does not of itself indicate that transmission occurred within the school or childcare facility, as exposure and transmission may have occurred elsewhere.

Data source: case-based data: CIDR, September 13th 2021; outbreak data: CIDR, September 14th 2021
Please note that school and CCF closures/reduction in capacity have reflected patterns of COVID-19 in the general population, rather than the number of cases in schools and CCFs.

Outbreaks associated with children and staff in childcare facilities

Childcare facility outbreaks:

- 552 childcare facility outbreaks, involving 2,930 linked confirmed cases, were notified to HPSC since week 32 2020
- 157 childcare facility outbreaks, involving 740 linked confirmed cases, were notified to HPSC during wave 4
- 22 childcare facility outbreaks, involving 80 linked confirmed cases, were newly reported to HPSC in week 36

Data source: CIDR, September 14th 2021

Figure 4: Number of COVID-19 outbreaks associated with staff and children in childcare facilities during wave 4 of the pandemic in Ireland (week 26 to week 36, 2021)

Please note that there are delays to the notification of outbreaks and linking of outbreak-associated cases on CIDR due to the May 2021 cyber-attack on the HSE IT system. For this reason, the number of outbreaks reported may be an underestimate. Furthermore, the number of linked cases was correct at the time of reporting to HPSC but the outbreak may have grown in size since reporting.
Outbreaks associated with children and staff in schools

School outbreaks:
- 815 school outbreaks, involving 3,697 linked confirmed cases, associated with the 2020/21 academic year
- 91 school outbreaks, involving 457 linked confirmed cases, were notified to HPSC during wave 4
- 57 school outbreaks, involving 278 linked confirmed cases, associated with the 2021/22 academic year
- 40 school outbreaks, involving 191 linked confirmed cases, were newly reported to HPSC in week 36

Please note that there are delays to the notification of outbreaks and linking of outbreak-associated cases on CIDR due to the May 2021 cyber-attack on the HSE IT system. For this reason, the number of outbreaks reported may be an underestimate. Furthermore, the number of linked cases was correct at the time of reporting to HPSC but the outbreak may have grown in size since reporting.

Figure 5: Number of COVID-19 outbreaks associated with staff and children in schools during wave 4 of the pandemic in Ireland (week 26 to week 36, 2021)

Please note these data incorporate outbreaks associated with both the 2020/21 and 2021/22 academic year.

Data source: CIDR, September 14th 2021
## Week 36 Summary: Cases and outbreaks in current week and in wave 4 of the pandemic in Ireland, week 26 - week 36 2021

</tbody>
</table>

1. Excludes cases of unknown age.
2. All confirmed cases may not yet have been linked to the outbreak on CIDR. Ranges in number of linked cases that contain “0” currently have no linked cases on CIDR or the aggregate number of associated cases has not been specified.

Please note that there are delays to the notification of outbreaks and linking of outbreak-associated cases on CIDR due to the May 2021 cyber-attack on the HSE IT system. For this reason, the number of outbreaks reported may be an underestimate. Furthermore, the number of linked cases was correct at the time of reporting to HPSC but the outbreak may have grown in size since reporting.

Data source: case-based data: CIDR, September 13th 2021; outbreak data: CIDR, September 14th 2021

Sincere thanks are extended to all those who are participating in the collection of data and reporting of data used in these reports. This includes the HSE COVID-19 Contact Management Programme (CMP), staff in ICU units, notifying clinicians, laboratory staff, Departments of Public Health, nurses, surveillance scientists, microbiologists and administrative staff.

**Report prepared by COVID-19 Epidemiology Team, HPSC**
Technical Notes

1. Data Source
   • Data are based on statutory notifications and were extracted from Computerised Infectious Disease Reporting (CIDR) system. Data are provisional and subject to ongoing review, validation and update. As a result, figures in this report may differ from previously published figures.

2. Population data
   • Population data were taken from Census 2016. Data were aggregated into the following age groups for the analysis: 0-4 years, 5-12 years, 13-18 years, >18 years.

3. Outbreak recognition date
   • Due the cyber-attack on the HSE IT system in May 2021 there have been delays in notification of outbreaks on CIDR. For this reason, outbreaks notified after week 19 2021 are analysed by “Outbreak recognition date”, where available, rather than the date the outbreak was notified on CIDR.

4. Outbreak size
   • For outbreaks notified prior to week 19 2021, the number of linked confirmed cases/outbreak size is based on laboratory confirmed cases linked to an outbreak in CIDR. For outbreaks notified since week 19 2021, the number of associated cases/outbreak size is based either on laboratory confirmed cases linked to an outbreak in CIDR OR on an aggregate number of cases provided at the time of outbreak notification, whichever number is largest. The number of associated cases was correct at the time of reporting to HPSC but outbreaks may have grown in size since the time of reporting.
