Applications for Patents

From 06/10/2023 to 19/10/2023

The names of applicants are in alphabetical order. In the case of joint applicants, each name is given independently. The title of the invention should not be regarded as an exhaustive indication of the subject-matter. The date immediately following the title is that on which the application was filed; in the case of a divisional application, the filing date of the earlier application is added within parentheses. Where an application has been filed pursuant to Section 127A, the filing date shall be either the date of the originating PCT filing, where applicable, or the date directed by the Controller. Where the application invokes the Paris Convention, the Convention country and priority date(s) claimed are given in square brackets. Where an application claimed the priority of an earlier application filed at this Office, this information is given within the square brackets. The number is that of the application and should be used for correspondence purposes up to the date of grant of a patent. The letter S preceding the number indicates that the application is for a short-term patent. A new number will be given when a patent is granted and this new number should be quoted in all correspondence subsequent to grant.

Patents Granted Under Section 34

The number of a patent is given in heavy type; the letter S preceding the number indicates a short-term patent. The code numbers following the title of each invention are those of the International Patent Classification. The date of filing the application follows the proprietor's name. The patent application number, which follows the date of application in parenthesis, has been superseded by the patent number. In the case of an application claiming the priority of an earlier application, the name of the country where the earlier application was made and the date of the earlier application are shown in square brackets.

By virtue of Section 65(3), the application relating to any short-term patent appearing in the following list whose date of filing is later than the date which is 18 months prior to the date of this issue of the Journal becomes open to public inspection as and from the date of this issue of the Journal.

Translation of Claims of European Patent Applications Designating the State - Section 120(6)

Translations in respect of the following applications have been received by the Office and are open to public inspection.

The publication number of the application is shown first, followed in parenthesis, by the application number.

4065265 **(20828848.0)**

Applicant: SmartDyeLivery GmbH

As prescribed under Section 120(6) of the 1992 Patents Act, the translated claims of European Patent application 20828848.0 are published below.

Claims

1. Reactor for preparing a formulation, wherein the reactor comprises at least two apertures, a base and at least one sidewall extending flush therefrom, wherein the base and the sidewall together define a mixing chamber with a height hM and at least one axis of symmetry arranged substantially perpendicular to the base and at least one distance r from the sidewall, wherein a first aperture is arranged within the base or adjacent to the base in the sidewall of the mixing chamber at a height hA ranging from 0.6 to 0.0 hM in order to introduce free-flowing materials and/or mixtures to the mixing chamber, and wherein the first aperture is configured with a non-return valve disposed therein or adjacent thereto, the non-return valve permitting the introduction of free-flowing materials to the mixing chamber through the aperture, but preventing outflow of free-flowing materials from the mixing chamber through the aperture; and wherein the first aperture is formed with an aperture area extending in a range between a minimum and a maximum, the minimum area being 0.05 mm^2 and the maximum area being determined by a value resulting from $Volumemixing\ chamber [cm^3] / Areafirst\ aperture [cm^2] \sim 5500$.
 2. Reactor according to claim 1, wherein the first aperture is arranged adjacent to the base in the sidewall of the mixing chamber at a height hA ranging from 0.4 to 0.1 hM , preferably ranging from 0.25 to 0.15 hM .
 3. Reactor according to one of claims 1 or 2, wherein the sidewall is cylindrical.
 4. Reactor according to any one of the preceding claims, wherein a supply conduit is arranged around the first aperture on the side of the sidewall facing away from the mixing chamber, wherein the supply conduit is designed as a receiving connector with a terminal thread for receiving the non-return valve.
 5. Reactor according to claim 4, wherein the supply conduit is designed as a threaded closure having an internal thread.
 6. Reactor according to one of claims 4 or 5, wherein the first aperture and the supply conduit are dimensioned with respect to the mixing chamber such as to prevent re-mixing of the liquid from the mixing chamber into the supply conduit.
 7. Reactor according to any one of the preceding claims, wherein the second aperture is arranged as a closable conduit for the introduction of free-flowing materials and/or mixtures of materials into the mixing chamber of the reactor and/or their discharge therefrom.
 8. Reactor according to claim 7, wherein the second aperture is arranged as a conduit positioned in the base of the mixing chamber substantially along its at least one axis of symmetry.
-

9. Reactor according to any one of the preceding claims, wherein an additional aperture of the reactor is arranged opposite of the base.
 10. Reactor according to any one of the preceding claims, wherein the mixing chamber is provided with at least one baffle arranged on the sidewall.
 11. Reactor according to one of the preceding claims, wherein the formulation to be prepared is selected from the group comprising nanostructured carrier system, polyplex, nanoparticles, liposome, micelle, microparticles.
 12. A reactor system for preparing a formulation comprising a reactor according to any one of claims 1 to 11, and a stirring tool, wherein the stirring tool is arranged in the reactor such that it generates an axis of rotation within the free-flowing material and/or mixture during operation, which axis of rotation is largely congruent with the axis of symmetry of the mixing chamber.
 13. Reactor system according to claim 12, wherein the stirring tool is selected from the group comprising axial flow mixer, radial flow mixer, magnetic mixer, disperser.
 14. Reactor system according to claim 12 or 13, further comprising an introduction device and/or a pumping device connected to the first aperture and/or the supply conduit.
 15. A method of preparing a formulation comprising the steps a. adding a first fluid to a mixing chamber of a reactor system according to any one of the claims 12 to 14, b. stirring the first fluid such as to generate a vortex, c. supplying a second fluid to the first fluid from a reservoir, wherein a material or mixture of materials substantially insoluble in the first fluid is dissolved in the second fluid, while the second fluid is completely soluble in the first fluid, wherein the second fluid is supplied to the mixing chamber via the first aperture such that the second fluid enters the first fluid in the region of the vortex exhibiting the highest speed of the fluid elements.
 16. The method according to claim 15, wherein in step b, a stirring tool is used with stirring blades for generating the vortex in the first fluid.
 17. The method according to claim 16, wherein in step c, the second fluid enters the first fluid in the region of the stirring tool where v_{tip} is the highest, with: $v_{tip} \leq KND$, wherein v_{tip} = speed at the tip of the respective impeller blade, N = agitation velocity, D = diameter of the impeller of the stirring tool.
 18. The method according to any one of claims 15 to 17, wherein the second fluid is supplied via a pumping device.
 19. The method according to any one of claims 15 to 18, wherein the formulation to be prepared is selected from the group comprising nanostructured carrier system, polyplex, nanoparticles, liposome, micelle, microparticle.
