Mean annual rainfall (millimetres) 1941 - 1970

Monthly and Annual Averages of Rainfall for Ireland 1941-1970.

This note contains tables giving the monthly and annual averages of rainfall for the 30-year period 1941-1970 for about 900 stations, together with a map showing the distribution of the average annual rainfall for that period.

Rainfall data for the World Meteorological Organisation standard period 1931-1960 have already been published (Meteorological Service, 1973). However, it was decided to compute and publish averages for the 1941-1970 period also, for two reasons. Firstly, a large number of stations were established between 1941 and 1950 and have over 20 years of continuous record in the 1941-1970 period. Secondly, it is desirable to provide a link with the latest British rainfall averages which are for 1941-1970.

The stations considered were those with at least 10 complete years of data in the period 1941-1970 and also those which were established between 1961 and 1965 and were still in operation in 1975. The averages for stations whose record covered the full period 1941-1970 were determined directly, after the data had been subjected to tests for homogeneity. Averages for stations with less than 30 years data were estimated by reference to nearby stations with longer periods of record.

Notes on the tables.

The data given for each station consist of the station name, grid reference, height in metres above Irish Ordnance Datum, the year in which the station opened, the year in which it closed (if not still in operation) and its monthly and annual rainfall averages, in millimetres, for the period 1941-1970. The letter M preceding a station name means that the gauge is read monthly. At all other stations the gauge is read daily. The stations are arranged in alphabetical order within counties which, in turn, are in alphabetical order. An exception to this is that the monthly-read stations are grouped together at the end of each county.

Notes on the map.

The map has been reduced from an original on a scale of 1:625000. On the original map, the isohyets were at intervals of 100mm. from 700 to 1400mm., at intervals of 200mm. from 1400 to 2000mm. and at intervals of 400mm from 2000 to 3200mm. On the reduced map, only the isohyets of 800, 1000, 1200, 1600 and 2000mm. are shown. Copies of the original large scale map may be obtained from the Meteorological Service.

The original map is based on the data in the tables and on data kindly supplied by the Director-General, Meteorological Office, Bracknell. The isohyets were drawn in consultation with the Meteorological Offices in Belfast and Bracknell.

Reference.

Meteorological Service 1973 Rainfall in Ireland 1931-1960.
